Job Description

Tell me about Igloo!
One of our core beliefs at Igloo is that people are a company's biggest asset. This philosophy is woven into everything we do at Igloo – our behaviors, our culture, and especially our digital workplace solutions, which we use internally every day. You might say we talk the talk and walk the walk!
Igloo's goal is to help people communicate and collaborate in the workplace. This means creating simple but effective workflows to enable people to create content and a delightful experience for consuming and collaborating on it.
And that's why we can offer you a superior employee experience that goes beyond superficial perks and promises and gives you the true sense of purpose you've been waiting for.

Why this role is important:
As a Junior Software Test Specialist, you are passionate about software testing and quality. In this role you will work closely with the quality and release team to detect regressions in existing features and thoroughly test new features to ensure quality throughout the application as it continues to grow and change.
The primary functions of the role will be writing and executing test cases for new features, writing detailed bug reports and reproduction steps, maintaining existing test cases as previously released features change, verifying bug fixes, and ensuring previously logged and unresolved defects are still valid and require remediation. There will also be an opportunity to contribute to our automated test development depending on your interest and availability after primary duties are completed.

The impact you'll have:
• **Collaborate:** work closely and collaboratively with the QA and Development teams throughout the Development organization to drive forward objectives
• **Deliver:** test management and test reporting throughout the software development lifecycle using Xray and Jira

The keys to success:
• 1-3 years of Quality Assurance or Software Testing experience
• Experience writing and executing test cases, possibly working within a Test Case Management Framework such as Xray
• A passion for thoroughly testing and exploring software with the goal of improving user experience as much as possible
• Excellent critical thinking skills and a self starter attitude
• Excellent written and verbal communication skills

What Igloo can offer you!
We offer a training budget for every employee, health benefits and a wellness spending account, and support a hybrid work environment. You choose whether you work on a Mac or PC, whatever hardware makes your work easier. We are also proud to offer a 100% remote-first work environment for each role at Igloo!
If you're looking for a role with the right mix of autonomy and team collaboration, an environment that fosters transparency and trust, a company with seasoned leadership and backed by a leading investment firm, a career with lots of opportunity and room for growth, and a chance to personally influence how organizations work, then we invite you to step inside Igloo.

Sound like you? Apply now!
Igloo is committed to building and supporting a culture of equity, diversity, inclusion, and accessibility. We hire the best talent and welcome applications from all qualified individuals, especially those from underrepresented and systemically oppressed groups.
Accommodations are available on request to enable your full and inclusive participation in our recruitment process. Please contact hr@igloosoftware.com for if you require support.
