## Job Description

---

*his is a flexible position and has the option of working in our Toronto office full time, hybrid throughout the week or working entirely remotely. #LI-REMOTE*

### Position Summary

Vena is on a journey to transform the way organizations plan to grow their businesses and we need awesome people to help. We are looking for a detail-oriented Product Manager to join the Product Team and work closely with software engineers, designers, architects and stakeholders from across the business to build new and exciting features for our customers. Identifying and executing on these opportunities will help revolutionize how we do business and accelerate your career.

As a Product Manager, your goal is to help build an experiment-friendly culture that empowers teams to build great products and own their code all the way into production. You will also gather feedback and investigate performance of the product features you build. You will be an essential part of the team as we scale our teams and push ourselves to become the next great Canadian software company.

### What you will do

- Align Vena's product roadmap with business strategies and establish a shared vision across stakeholders
- Write requirements for your scrum team and PM the software development lifecycle
- Assess opportunities and develop prototypes in order to determine the best solutions from user experience and business outcome perspectives
- Serve as the liaison between the user community (users, internal consultants and external customers) and the software engineering team
- Apply Design Thinking to develop hypotheses and seek user validation to ensure that we are building the right products and features for our customers
- Develop and own roadmaps and define requirements for how new features and enhancements will come to life
- Collaborate with software developers, Product Managers and stakeholders to identify, assess, build and release new software
- Leverage data and analytics tools to measure effectiveness and performance of features and define next steps

### Does this sound like you?

- 2+ years of experience in a product or customer facing role with hands on technical experience (Professional Services, Sales engineering, Product Support)
- You are an excellent communicator and are collaborative, diligent and open in your working style
- You are curious and passionate about customers and how to introduce products to help solve the problems they face
- Technically savvy with a desire to know the details of how something is built
- You are familiar with quantitative research methods and finding patterns and insights in the data
- You are familiar with Agile software development, any SaaS experience is a plus
