Job Description

About You

You want to work for a fast-paced company that thinks big and dreams huge. You are driven, view work as more than just a job, and are never satisfied with a project left half-done. You have a strong sense of personal ownership and responsibility for completion of objectives on time. You want to figure out why things tick which makes you tick but very little ticks you off. You want to think outside of the box and continually challenge your own limits, as well as those around you. You have a mad scientist mentality where you want to be part of the robots building robots revolution.

About Attabotics

Attabotics is the world's first 3D robotics supply chain system for modern commerce. Inspired by the framework of ant colonies, Attabotics replaces the rows and aisles of traditional fulfillment centers with a patented storage structure and robotics shuttles that utilize both horizontal and vertical space, reducing a company's warehouse needs by 85%. By empowering retailers to place fulfillment centers near high-density urban areas, Attabotics helps create jobs and decrease carbon emissions by closing the last-mile delivery gap. Attabotics is a TIME Magazine Most Innovative Company special mention, CNBC Disruptor, and one of Fast Company's world's 50 most innovative companies. Attabotics is based in Calgary, Alberta, Canada, with fulfillment centers across the United States and Canada.

The Role

Attabotics is at an inflection point evolving as an organization from incubation to commercialization. The Product Manager Software will drive decisions based on a succinct vision of how our technology will deliver the best outcomes for our clients. In partnership with Operations and Engineering, you will create detailed use cases that will prioritize product scenarios, identify benchmarks that position Attabotics for industry success and coordinate hardware release criteria. Moreover, this leadership opportunity will contribute their technical expertise while providing strategic business guidance.

As a leader at Attabotics you will be actively involved in the development process steering the team toward incremental success. This opportunity requires an exceptional understanding of both software and hardware dependencies.

Who you are

• A degree in Engineering, Computer Science, or a similar technical field
• 7+ years of Product Management experience in a fast-paced technology environment
• Experience in hands-on software and/or hardware development
• Demonstrated ability to meld market needs and technology to create a compelling product roadmap
• Strong leadership skills with cross-functional teams with a focus on collaboration, business success, and facilitating alignment between project teams and executive team
• Highly organized and results oriented. Ability to distill multiple inputs and competing priorities into a coherent plan of action
• Drive issues to closure by bringing together key stakeholders for real-time decision making
• Strong communication and presentation skills
• A portfolio of successful products and projects (as well as a collection of lessons learned from failed ones)

What we need

• Partner with Engineering and all departments to envision, develop and execute on the Attabotics product roadmap
• Collaborate with internal and external stakeholders to develop well-defined requirements for projects on the Attabotics product roadmap, with a clear definition of why features are needed
• Work closely with Technical, Marketing and Operations teams to ensure product objectives are met, and implement effective strategies to optimize product planning and development
• Plan and implement KPIs to quantify market impact of new products and enhancements
• Support product development activities from a planning, technical, and business perspective to enable smooth project delivery and ensure successful launch
• Conduct deliverable reviews during project transitions to make sure projects are meeting requirements, that remaining risks and work are understood, and that deliverables are achievable
• Maintain and foster a collaborative environment that highlights business priorities, removing roadblocks, and sharing unique and creative solutions
• Assist in evolving and refining the Product Management practice at Attabotics
• Assist in cross-functional process improvement with operations and technical groups
• Perform other duties as may be assigned

If this description describes you perfectly and the work environment you know you can thrive in, send us your resume as well as describe to us what you're passionate about and we may just reach out to you.

Attabotics is committed to employing the best people to do the best job possible within our environment. We hire based on merit and are strongly committed to cultivating diversity as a source of excellence. Attabotics firmly believes that diverse perspectives drive innovation and business success. We embrace a wide range of differences, as they contribute to our uniqueness and strength.

Successful candidates for this position will undergo a criminal record check, and must provide proof of legal eligibility to work in the country they applied to without sponsorship.

Attabotics promotes a corporate safety culture where employees' health, safety & well being is number one and with the ultimate goal of establishing a zero incident work environment.
