Job Description

We are seeking a dynamic and experienced Technical Product Manager to join one of our teams at Level Access!

Responsibilities

- Drive the overall knowledge of the product, the problems it solves, and the benefits it offers customers and end-users
- Use data and insights to advise product decisions and independently define the analysis we need for sound decision-making.
- Serve as the full-stack product manager for key technical applications, including our SDKs, CI/CD and IDE integrations.
- Lead exploration of new use cases, mapping our outstanding science/engineering capabilities to market opportunities, iterating quickly towards MVP and in-market testing.
- Crucial contributor to product vision and strategic direction
- Interact with users to understand their needs and develop new opportunity hypotheses.
- Daily interactions with our engineering, science, design, and go-to-market teams, driving alignment around our product vision and roadmap
- Stay on top of market trends related to Accessibility in the Enterprise.
- Drive product delivery, from alpha/beta MVP through to general release maturity

Qualifications

- 5+ years in a technical role, with at least 4 of those in a product management role
- Strong grasp of product management fundamentals and an interest in mentoring others
- Focus on shipping products and experimenting in-market with engaged early adopters
- BSc. or equivalent in computer science or related fields
- Established proficiency in the software development lifecycle, standard processes for CI/CD
- Comfortable working with products that do not have a UI, such as SDKs for developers.
- Experience conducting user interviews and truly understanding and listening to problems
- Experience taking products from ideation to launch with clear success metrics for external or internal customers
- Ability to communicate sophisticated ideas clearly and to listen carefully to the needs and experiences of others
- You thrive under the energy and ambiguity of early-stage product development, continually developing hypotheses, testing them, and iterating at a fast pace

Nice to have

- Knowledge of regulations related to digital accessibility (e.g., Section 508, ADA)
- Knowledge of WCAG 2.1 AA requirements
- Experience using diverse personas to influence product design
- Experience as a software developer or QA automation engineer
- Experience crafting accessible experiences
- Experience with accessibility conformance testing

Application Process

If you thrive in a fast-paced, early-stage product development environment and are eager to make a significant impact in the field of accessibility, we would love to hear from you! This is a full-time salaried position with a competitive benefits package, including bonus opportunities and unlimited vacation/FTO. Salary is commensurate with experience. For immediate consideration, we ask that you please submit the cover letter and resume.
